EPR Order Reconciliation Management Project

On January 31, 2022, St. Boniface Hospital will be the first facility in Manitoba to start using the integrated *Electronic Patient Record (EPR) Order Reconciliation and Prescription Writer* functions. As part of this implementation, Community Pharmacists will receive two new reports from St. Boniface Hospital replacing the SBGH Discharge Medication Reconciliation / Prescription Order Form.

1. The **Discharge Prescription** will have a new format and it lists the medication name, indications (if entered), instructions, quantity, duration and refills for those medications the patient requires a supply of.
2. The **Discharge Medication Reconciliation Summary** report is a reference for the complete list of medications on discharge, medications on admission, and prescriptions provided in standard tables. It is intended for primary care providers and community pharmacists. The *Medications on Discharge* section contains all the medications that the prescriber intends for the patient to take after their hospital stay. Discontinued home medications may be indicated on the prescription and/or the summary report. If not indicated, the pharmacist can discern which home medications have been discontinued at discharge by comparing the admission and discharge tables.

Please see below for samples.
